Cost-Effectiveness of Florbetapir-PET in Alzheimer's Disease: A Spanish Societal Perspective

John Hornberger, Steven Michalopoulos, Minghan Dai, Paula Andrade, Tatiana Dilla, Michael Happich

Supplementary Materials

Table S1. Model formulas

Table S2. Probabilistic sensitivity analyses input table

Table S3. Consolidated Health Economic Evaluation Reporting Standards (CHEERS) checklist

Table S4. Results of one-way sensitivity analyses

Table S5. Results of alternate scenarios

Item	Parameter description	Formula
1	Age, monthly increment	$(Age_start) + (1/12)$
2	Monthly change in MMSE without AChEIs	[(Starting MMSE)-(Annual decline in MMSE score)]/12
3	MMSE when AChEIs are initiated	(MMSE)+(Change in MMSE at treatment initiation)
4	MMSE when AChEIs are discontinued	(MMSE)+(Change in MMSE when treatment discontinues)
5	Probability of AChEI treatment	Probability receiving treatment *
	discontinuation by month	([1-Probability of AChEIs discontinuation]/12)
6	Transitional probability for	[(Baseline nursing home placement) *
	nursing home placement by year	(Hazard ratio of instituationalization per unit increase in MMSE)] [^]
		(Change in MMSE from baseline)
7	Transitional probability for	1-(1-Annual transitional probability for nursing home
	nursing home placement by month	placement)^(1/12)
8	Transitional probability for community dwelling	(Probability in community)*(1-Probability of death if in community)*
		(1-Transitional probability of nursing home placement)

Table S1. Model formulas

Abbreviations: AChEI(s), Acetylcholinesterase inhibitor(s); MMSE, Mini-mental state examination.

Table S3. Consolidated Health Economic Evaluation Reporting Standards(CHEERS) checklist

CHEERS checklis	st - items	to include when reporting economic evaluations of health inter	ventions
Section/item	No.	Recommendation	Reported
Title and abstract			,
Title	1	Identify the study as an economic evaluation, or use more specific terms such as "cost-effectiveness analysis" and describe the interventions compared	\checkmark
Abstract	2	Provide a structured summary of objectives, perspective, setting, methods (including study design and inputs), results (including base- case and uncertainty analyses), and conclusions.	\checkmark
Introduction			1
Background and objectives	3	Provide an explicit statement of the broader context for the study. Present the study question and its relevance for health policy or practice decisions.	N
Methods Target population &	4	Describe characteristics of the base area nonulation and subgroups	al
subgroups	4	analyzed including why they were chosen.	N
Setting and location	5	State relevant aspects of the system(s) in which the decision(s) need(s) to be made.	\checkmark
Study perspective	6	Describe the perspective of the study and relate this to the costs being evaluated.	\checkmark
Comparators	7	Describe the interventions or strategies being compared and state why they were chosen.	
Time horizon	8	State the time horizon(s) over which costs and consequences are being evaluated and say why appropriate	\checkmark
Discount rate	9	Report the choice of discount rate(s) used for costs and outcomes and cay why appropriate.	\checkmark
Choice of health	10	Describe what outcomes were used as the measure(s) of benefit in the	\checkmark
outcomes Measurement of effectiveness	11a	evaluation and their relevance for the type of analysis performed. Single study–based estimates: Describe fully the design features of the single effectiveness study and why the single study was a sufficient source of clinical effectiveness data	\checkmark
	11b	Synthesis-based estimates: Describe fully the methods used for the identification of included studies and synthesis of clinical effectiveness data	\checkmark
Measurement and valuation of preference-based	12	If applicable, describe the population and methods used to elicit preferences for outcomes.	\checkmark
outcomes Estimating resources and costs	13a	Single study-based economic evaluation: Describe approaches used to estimate resource use associated with the alternative interventions. Describe primary or secondary research methods for valuing each resource item in terms of its unit cost. Describe any adjustments made	Not applicable
	13b	Model-based economic evaluation: Describe approaches and data sources used to estimate resource use associated with model health states. Describe primary or secondary research methods for valuing each resource item in terms of its unit cost. Describe any adjustments made to approximate to opportunity costs	\checkmark
Currency, price, date and conversion	14	Report the dates of the estimated resource quantities and unit costs. Describe methods for adjusting estimated unit costs to the year of reported costs if necessary. Describe methods for converting costs into a common currency base and the exchange rate.	\checkmark
Choice of model	15	Describe and give reasons for the specific type of decision-analytic model used. Providing a figure to show model structure is strongly recommended.	\checkmark

Table S3. Consolidated Health Economic Evaluation Reporting Standards (CHEERS) checklist

CHEERS checklis	t - items	to include when reporting economic evaluations of health inter	ventions
Section/item	No.	Recommendation	Reported
Assumptions	16	Describe all structural or other assumptions underpinning the	
A 1 / / / 1	17	decision-analytic model.	.1
Analytic methods	1/	Describe all analytic methods supporting the evaluation. This could	N
		include methods for dealing with skewed, missing, or censored data;	
		validate or make adjustments (e.g., half evale corrections) to a model:	
		and methods for handling population heterogeneity and uncertainty.	
Results			
Study parameters	18	Report the values, ranges, references, and if used, probability	\checkmark
		distributions for all parameters. Report reasons or sources for	
		distributions used to represent uncertainty where appropriate.	
		Providing a table to show the input values is strongly recommended.	,
Incremental costs and	19	For each intervention, report mean values for the main categories of	
outcomes		estimated costs and outcomes of interest, as well as mean differences	
		between the comparator groups. If applicable, report incremental cost-	
C1	20	effectiveness ratios.	1
Characterizing	20a	Single study-based economic evaluation: Describe the effects of	N
uncertainty		sampling uncertainty for estimated incremental cost, incremental	
		the impact of methodological assumptions (such as discount rate	
		study perspective)	
	20h	Model-based economic evaluation. Describe the effects on the results	\checkmark
	200	of uncertainty for all input parameters and uncertainty related to the	,
		structure of the model and assumptions.	
Characterizing	21	If applicable, report differences in costs, outcomes, or cost-	\checkmark
heterogeneity		effectiveness that can be explained by variations between subgroups	
		of patients with different baseline characteristics or other observed	
		variability in effects that are not reducible by more information.	
Discussion			1
Study findings,	22	Summarize key study findings and describe how they support the	
limitations,		conclusions reached. Discuss limitations and the generalizability of	
generalizability, and		the findings and how the findings fit with current knowledge.	
Other			
Source of funding	23	Describe how the study was funded and the role of the funder in the	\checkmark
Source of funding	25	identification design conduct and reporting of the analysis Describe	•
		other nonmonetary sources of support.	
Conflicts of interest	24	Describe any potential for conflict of interest among study	\checkmark
		contributors in accordance with journal policy. In the absence of a	
		journal policy, we recommend authors comply with International	
		Committee of Medical Journal Editors' recommendations.	

Note. For consistency, the Consolidated Health Economic Evaluation Reporting Standards (CHEERS) checklist format is based on the format of the CONSORT statement checklist.

Table S5. Results of alternate scenarios

 Cost per QALT game
 Cost-saving

 Abbreviations: AChEIs, Acetylcholinesterase inhibitors; AD, Alzheimer's disease; FDG, Fluorodeoxyglucose; PET,
 Positron emission tomography; QALY(s), Quality-adjusted life year(s); SCE, Standard clinical evaluation.
 Costs reported in 2013 Euros. * Earlier testing and initiation of treatment (MMSE score = 22). ** Fluorodeoxyglucose-PET + Standard Clinical Evaluation as comparator.
